Around 90 percent of the plasma that reaches tissues from the arterial blood capillaries is returned by the venous capillaries and back along veins. Skip to content Increase Font Size. The thymus is divided into two lobes which each have an outer cortex and an inner medulla.

Following MI, the innate immune system directs the phagocytosis of dead cells. Contractions in the arteries and skeletal muscles, breathing, blood pressure and the volume of lymph in the lymphatic system also influence the rate at which lymph is pushed through the lymphatic vessels. First, several tiny sacs called lymph sacs form. Think about It What is the main function of the lymphatic system?

The blood next passes through the tricuspid valve to enter the right ventricle. care: Dr Joe Kosterich.
