Abstract: Whenever there are group actions, interesting things happen. Questions such as whether we live in a spatially finite universe, and what its shape and size may be, are among the fundamental open problems that high precision modern cosmology needs to resolve.

For the mathematical structure, see Topological space. Weakly Whitney preskeletonize With the [Skeletonize 3D] command, 6 the thickness of all trabeculae in the 3D structure was converged into 1 voxel volumetric pixel; Fig. From this need arises the notion of homeomorphism. I will give a panorama of the current state of affairs on these classification problems.
